

FORMULARY

Only medicines from the formulary can be used for treatment under the Minor Ailments Scheme (MAS). These products can be used for any of their licensed indications at licensed doses. Pharmacists can supply any brand of product as long as the active ingredients are the same and pack size is at least the size specified (e.g. larger packs can be supplied) but payment will be in line with DM&D prices. The products supplied must not be POM packs and each product must be supplied with a corresponding Patient Information Leaflet.

The pharmacist making the supply is professionally accountable for the treatment decisions made.
